

# **Determination of Public Land (Rangeland) Health for 64008 - MACHO**

The Record of Decision (ROD) for the New Mexico Standards for Public Land Health and Guidelines for Livestock Grazing Management (dated January 2001) adopted three Standards for Public Land Health. These are (1) Upland Sites Standard, (2) Biotic Communities, including native, Threatened, Endangered, and Special Status Species Standard and (3) Riparian Sites Standard.

The ROD also established a process for the BLM field Offices for implementation. Through a public participation process, the Roswell Field Office developed and adopted indicators to use in conjunction with existing monitoring data to assess these standards.

Field assessment worksheets and other available data that evaluate the local indicators were completed for this allotment. Based on these assessments, it is my determination that public land within the Macho allotment, 64008, meets the (1) Upland Sites standard and (2) Biotic Communities, including native, Threatened, Endangered and Special Status Species Standard. There are no public land Riparian areas on this allotment, therefore this standard was not addressed.

/s/ Jerry Dutchover .  
Assistant Field Manager

07/24/2012  
Date

## Standards of Public Land Health

### Evaluation of 64008 - MACHO Allotment

[ 03/21/2012 ]

The Roswell Field Office conducted rangeland health assessments at 5 study sites within 64008 - MACHO. The assessments looked at the Soil/Site Stability, Hydrologic Function and Biotic Integrity indicators within the vicinity of each study site. Existing monitoring data was incorporated into and in support of the field assessment. The summary of each assessment is attached and shown in the following table.

Study Area or Assessment Area	UPLAND			BIOTIC			RIPARIAN		
	Meets	Monitor an Indicator	Does Not Meet	Meets	Monitor an Indicator	Does Not Meet	Meets	Monitor an Indicator	Does Not Meet
64008-HORSE-E131	X			X			N/A		
64008-NORTHEAST-E132	X			X			N/A		
64008-NORTHWEST-E130	X			X			N/A		
64008-SOUTHEAST-E133	X			X			N/A		
64008-SOUTHWEST-E134	X			X			N/A		

Twenty-two (22) indicators for Rangeland Health were evaluated for public land on the Macho, allotment 64008. Ten of these assessed soil site stability, 11 hydrologic functions and 13 for biotic integrity. These qualitative assessments in conjunction with quantitative information gathered from previous data collected on 5 trend plot locations within this allotment were utilized to make rangeland health determinations. Quantitative evaluations are performed by the Roswell Field Office, which include some or all of the following: ground and vegetative cover and composition, production, frequency and ecological condition. These collections were initiated in the late 1970's/early 1980's are scheduled and conducted approximately every 5 to 10 years.

This allotment contains 7,257 acres of public land scattered among 3,810 acres of private lands. The studies are located on a Gyp Upland SD-3 site, a Shallow SD-3 site, a Loamy CP-2 site, a

Shallow Sand CP-2 site and a Very Shallow CP-4 ecological site. This is an “M” (Maintain) category allotment.

**Recommendations:**

At each location the team noted the presence of invasive species, usually yucca, creosote, cholla or catclaw. The level of invasion was enough to rate the areas as a Moderate departure from each of the ecological site description, but not enough to warrant mapping for a vegetation treatment, either by herbicide or prescribed burn.

As the majority of the indicators fall in the ‘None to Slight’ or ‘Slight to Moderate’ category, at each of the five study locations, this allotment is rated overall as “Meeting” the standard for Rangeland Health. Continue the rangeland monitoring studies to insure proper stocking rates are maintained and that the perennial grasscover and good plant composition remains.

### Part 3. Summary

A. Indicator Summary - Each of the indicators are associated with one or more of the attributes below. An indicator is placed in a category (columns) above and summed for each of the Standard Attributes.

Standard Attribute		Extreme	Moderate to Extreme	Moderate	Slight to Moderate	None to Slight
S	Soil	0	0	0	7	3
H	Hydrologic	0	0	0	9	2
B	Biotic	0	0	1	8	1

B. Attribute Summary. In this table, the Extreme and Extreme to Moderate columns in the table above are merged for the *Does not Meet* column, Moderate becomes *May Need More Info*, and Slight to Moderate and None to Slight merge to form the *Meets* columns. Values from the table are summarized below. Space is provided for rationale of the determination. This space should most certainly be used when the determination by the ID team conflicts with the summarized values. Provide the sources of information that lead to the determination. X out the appropriate box for each attribute to denote final agreed upon determination by the ID team.

Attribute	Rationale	Does Not Meet	May Need More Info	Meets
Soil		0	0	10
Hydrologic		0	0	11
Biotic		0	1	9
